

Research Area: Data Analytics.

Title: Impact of COVID-19 in Toddlers and Teenagers in India.

Expected Outcome:

1. AI based predictive model for disease spread pattern among kids and teenagers
2. Identifying the more susceptible population among them to help authorities in making suitable decisions
3. Prescription of immunity booster foods for the population under study, to break the spread.

Expected Timeline: 1- 2 years

Remarks: Toddlers and teenagers need to be given special attention to find the impact of the corona virus on children so that adequate facilities are made available for their care.

The Budget required would be around 2 lakhs
